## HP 1160 Toner Cartridge

For Technical Support, please call Memphis, TN at (888) 757-0762 or Nashua, NH at (888) 833-5727.

### OEM Reference Information

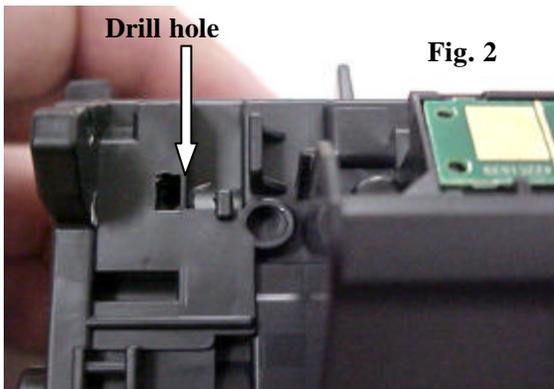

**OEM Product #:**  
Q5949A

**OEM Yield:**  
2,500 pages

1. Before separating the cartridge halves, remove the OPC protective shutter.
2. To remove the shutter, insert a small flat-head screwdriver underneath it and pry up.

*It is recommended to leave the small recoil spring attached to the shutter to prevent losing it.*

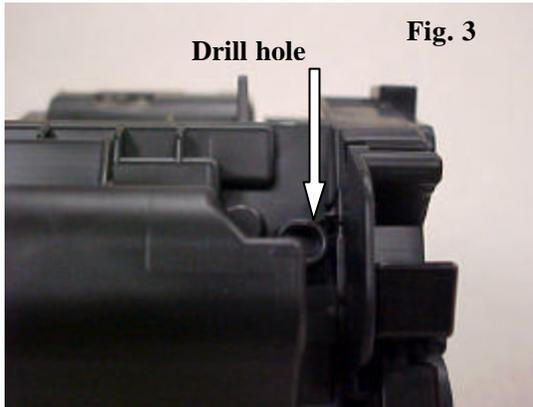

3. To separate the cartridge halves, drill a small hole in the area indicated in Fig. 2. The hole allows the metal pins that secure the cartridge sections together to be pushed out.

Nashua, NH (888) 833-5727

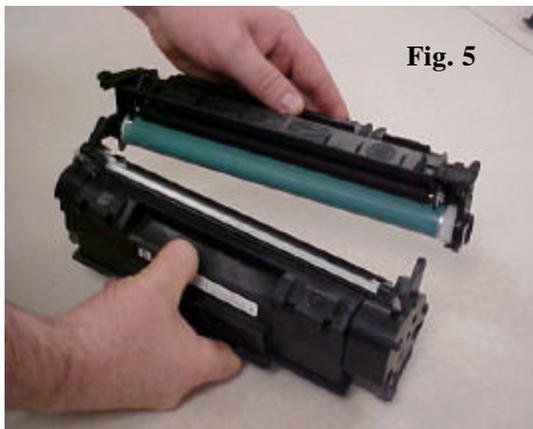

4. On the opposite side of the cartridge, drill a small hole as indicated in Fig. 3 to remove the metal locking tab.

5. After drilling the holes on both ends of the cartridge, push the pins out of the cartridge.

*It is recommended that you use a spring removal tool to push out the pins.*

6. Repeat this same operation on the other side of the cartridge.

7. After removing the locking tabs, separate the two sections.

**NOTE:** Take care not to damage the magnetic developer roller.

**8.** To remove the OPC, insert a small flat-head screwdriver between the end of the OPC and the inner cartridge wall.

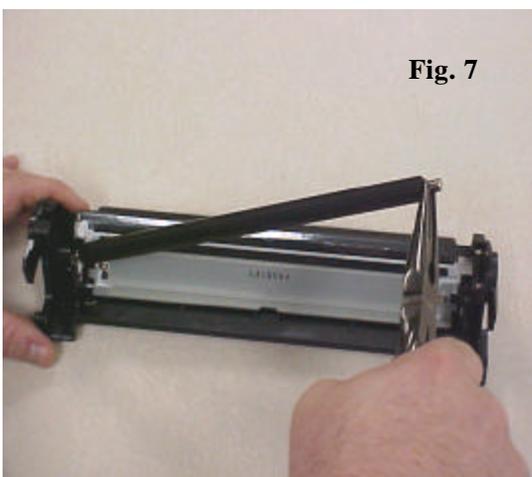

**9.** Hold the cartridge wall and gently pry the screwdriver outward. This will push the OPC axle out of position enough to use a pair of pliers to complete the removal process.

**10.** Grab the exposed head of the OPC axle with a pair of pliers.

**11.** Hold the cartridge waste bin steady with one hand and twist.

**12.** Pull the OPC axle out of its position.

**13.** Use needle nose pliers and gently pull up on the end of the PCR shaft.

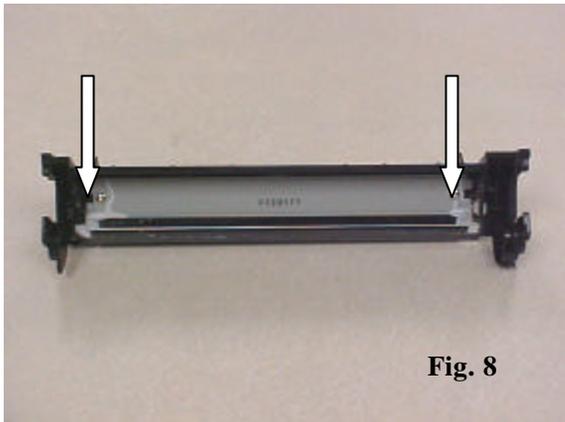

**14.** Clean the PCR with a lint free cloth dampened with tap water.

*To avoid damaging the PCR, it is recommended to wrap it in a lint free cloth and set it aside until it is time to re-install it.*

**15.** To change the wiper blade, remove the two screws as indicated in Fig. 8.

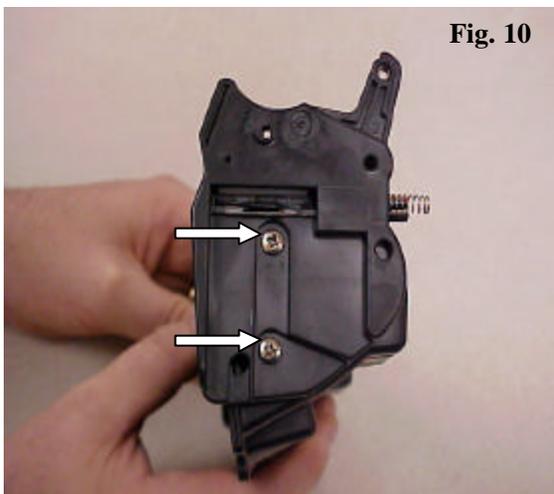

**NOTE:** Take care not to damage the recovery blade during this process.

**16.** Clean the waste hopper section with compressed air.

**17.** After cleaning out the waste toner, reassemble the components in reverse order.

**18.** Set the waste hopper section aside until it is time to rejoin the section with the completed toner hopper section.

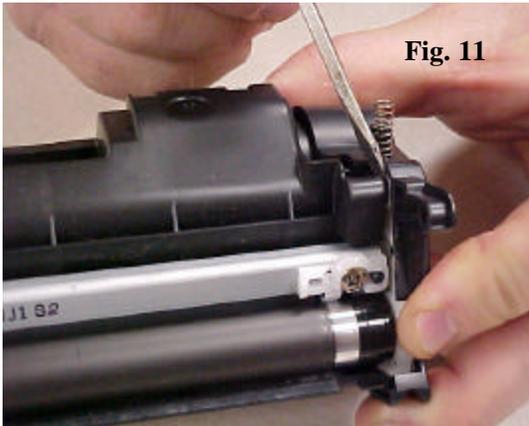

**19.** Remove the side cap by detaching the two screws as indicated in Fig. 10 to access the toner hopper for cleaning and refilling.

**NOTE:** The side cap remains attached to the cartridge even after the retaining screws have been removed.

**20.** There is a small, plastic alignment pin on the inside of the cap that is ultrasonically welded to the cartridge body. To detach, simply insert a small flathead screwdriver into the position as shown in Fig. 11 and pry outwards. This is sufficient to break the weld.

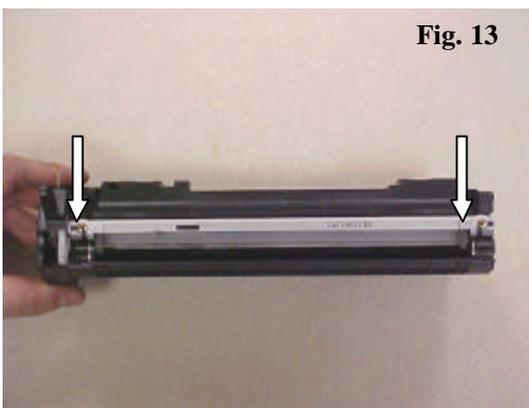

**NOTE:** During the reassembly process, it is necessary to use only the two retaining screws to secure the end cap to the toner hopper.

**21.** To remove the developer roller, grab the exposed part of the roller and pull it out.

**NOTE:** The developer roller stabilizer will remain in place as the end cap is not removable.

**NOTE:** Be careful not to loose the developer roller drive gear during the removal process. It will stay in the end cap detached from its location.

**22.** To remove the Dr. Blade, remove the two screws as well as the accompanying wipers.

*It is recommended to replace the Dr. Blade each cycle to maintain optimum print quality.*

**23.** After cleaning out all of the toner from the toner hopper, be sure that the electrical contacts are clean and reassemble in reverse order.

**24.** After completing this process, rejoin the toner hopper section to the completed waste hopper section.

**25.** After reassembling the cartridge, it is necessary to replace the OEM chip. Remove the OEM by prying it off with a small screwdriver as shown in Fig. 15.

*Before installing a new replacement chip, it is recommended to use a grounding strip to prevent any static discharge that can destroy the chip.*

**26.** Remove the backing from the pressure sensitive adhesive on the backside of the chip and install it in the same location as the OEM chip.
